PRESS RELEASE

The New Viking Hazmat Inlet Valve

The world wide leading dry suit manufacturer Viking has launched its new highly innovative “Viking Hazmat Inlet Valve”. The new valve is based on Viking’s extensive knowledge about contaminated water diving and the Swedish manufacturer SI Tech’s valve competence, together adding a new dimension to the safety of diving.

The “Viking Hazmat Inlet Valve” is equipped with an extra slide valve. The purpose of the slide valve is to enable the diver to shut off the airflow in an emergency situation. “For Professional divers entering contaminated water an inlet valve stuck open is a nightmare scenario. With the new slide valve, the diver can easily shut off the airflow in such rare incidents” says Gustaf Ekberg, Product Manager Viking.

The “Viking Hazmat Inlet Valve” is a swivelling valve made of a highly chemical resistant material. It is intended for commercial, rescue and military divers who have to work in heavily polluted waters.
